SUMMARY

CS student at Sinhgad Institute of Technology. Interning at Innnox IT Solutions right now, writing backend APIs that go to production. Built a few things worth showing — an AI productivity platform, a published paper on geopolitics and AI. The work speaks for itself, so I'll let it.

PROFESSIONAL EXPERIENCE

Innox IT Solutions LLP

January 2026 – Present | Pune, India

Spring Boot Development Intern

- Built RESTful APIs for a subscription-based Delivery Management System using Spring Boot, PostgreSQL, and layered MVC architecture.
- Developed billing and order management modules with recurring subscription logic and transactional integrity using Spring Data JPA.
- Implemented role-based authentication, documented APIs via Swagger UI, and collaborated on React Native integration using Git workflows.

PROJECTS

Smart Task Prioritizer

- Designed a two-service architecture: Next.js 16 on the frontend, a separate Python FastAPI service handling the AI side — priority scoring, energy-aware scheduling, K-Means habit clustering, burnout detection via Scikit-Learn.
- Security runs through the whole stack. Sliding-window rate limits per IP, Clerk Auth middleware on every route, IDOR checks before every DB write, Prisma transactions where consistency matters, CSP and Permissions-Policy headers on the way out.
- Frontend lives on Vercel. AI service runs in a non-root Docker container on Render. Supabase PostgreSQL in the back, Sentry and PostHog watching quietly.

AI-Powered Multi-Input Assistant

- Built a React 19 frontend backed by a Node.js server-side proxy, routing text, images, and documents through NVIDIA NIM APIs — Llama 3.1 for chat, Nemotron VL for vision, Nemotron Parse for PDF and DOCX extraction.
- Client-side file processing handles input directly into prompts where possible; fallback logic covers model configurations that don't support certain input types, with AbortController and 30-second timeouts keeping things from hanging.
- Deployed on Vercel with serverless functions holding API keys server-side, per-IP rate limiting at 20 req/min, XSS sanitization on rendered output, and localStorage persistence with blob-stripping to stay within quota limits.

EDUCATION

Bachelor of Engineering (Computer Engg.)

November 2022 – Present | Lonavala, India

Sinhgad Institute of Technology

Intermediate(12th)

June 2021 – May 2022 | Manmad, India

MRMV Junior College

Matriculation(10th)

June 2019 – May 2020 | Manmad, India

Good Shepherd School(ICSE)

PUBLICATIONS

Algorithmic Diplomacy: AI in Global Power Politics

March 2026

Ajanta Prakashan

- Published in a UGC-listed, peer-reviewed international journal (IDEAL – Journal No. 47026), Vol. XIV, Issue II, March–August 2026, pp. 102–109
- Explored how **AI is reshaping global diplomacy**, shifting power from traditional statecraft to data-driven decision systems.
- Analysed real-world use cases of **AI in geopolitics**, including surveillance, cyber strategy, and predictive intelligence.
- Examined risks like **algorithmic bias, lack of transparency, and ethical concerns** in international decision-making.
- Proposed the idea of **AI-assisted policy frameworks** to balance automation with human judgment.
- Connected concepts of **Artificial Intelligence + International Relations**, showing interdisciplinary thinking.

CERTIFICATES

- Tata Group - Cybersecurity Analyst Job Simulation 
- AWS APAC - Solutions Architecture Job Simulation 
- Postman API Fundamentals 

ORGANIZATIONS

Association of Computer Engineering Students (A.C.E.S)

July 2023 – April 2024

Technical Team Member
